U.S. Greenhouse Gas Emissions in 2017

The pie chart above shows the greenhouse gas emissions.

Greenhouse Gases

Greenhouse gases are caused by the activities us humans are doing this includes burning coal and petrol (fossil fuels) cutting down rainforests and other kind of forests. This is what we call global warming as the activities above start to increase global warming is becoming more and more effect full on our planet. This is also why we are having more mild winters and hotter summers.

The causes of global warming are things like bush fires, extreme weathers.

Air pollution

Air pollution is caused by all sorts of travel like airplanes, cars and buses. Sources of air pollution include gases like ammonia, carbon monoxide, sulfur dioxide, nitrous oxides, methane and chlorofluorocarbons ammonia. It may also cause lots of diseases and health issues. Air pollution is also causing lots of harm in other living things such as animals. It also causes bad effect on food crops.

Coronavirus

Air pollution may have risen in the last few years but while the danger of coronavirus has caused people to stay in. They have shortened because people aren't travelling. Recently there was a sighting of dolphins in Venice which shows the rivers are now becoming healthier and more animal-friendly.

Ways you can help

There is lots of ways you can help save bigger changes. As I mentioned before becoming vegan and vegetarian will help. Recycling reusing and reducing can also help especially when they are non-recyclable. The following websites are ecofriendly programs which have been arranged to recycle things that would not usually been. Make the change. Could you and your school become a better place? Check it out now!

- Eco bricks
- Recycle pens
- Clothing recycle scheme
